MOHAMMED ABDUL RAHEEM

INCIDENT RESPONSE / INCIDENT MANAGER

8897801323 | raheemmohd0000@gmail.com | github.com/raheemmohd | Hyderabad, India

CAREER OBJECTIVE

Cybersecurity fresher with practical, lab-built experience managing security incidents through the complete lifecycle — detection, analysis, containment, eradication, recovery and lessons-learned — using the NIST Incident Response framework. Experienced coordinating indicator-to-incident handoff between threat intelligence and response, with a focus on clear escalation, evidence documentation and root-cause-driven recommendations. Seeking an entry-level Incident Response / Incident Management role.

TECHNICAL SKILLS

IR Frameworks: NIST Incident Response Lifecycle, MITRE ATT&CK, Cyber Kill Chain

Detection & Response Tools: Splunk, IBM QRadar (SIEM), EDR concepts, SOAR playbook concepts, firewall/iptables containment

Threat Intelligence: MISP, VirusTotal, AbuseIPDB, ISAC bulletins, IOC confidence scoring

Documentation: Incident timelines, root-cause analysis, remediation & lessons-learned reporting

Other: Escalation tiering (Tier 1–3), cross-team handoff, Linux, networking fundamentals, IAM

CORE COMPETENCIES

Incident Triage & Escalation • Containment & Eradication Planning • Root-Cause Analysis • Cross-Team Handoff • Post-Incident Reporting & Detection Tuning

HANDS-ON PROJECTS

SOC Analyst Project — End-to-End Incident Lifecycle *[NIST IR Lifecycle, MITRE ATT&CK]*

- Managed 2 simulated incidents through the full NIST lifecycle (Preparation → Detection & Analysis → Containment → Eradication → Recovery → Lessons Learned).
- SSH brute-force incident: escalated a 40-attempt login attack to a confirmed admin-account compromise, directed containment (firewall block, forced password reset, session audit) and documented root cause (public SSH access, weak lockout policy) with tuning recommendations fed back into detection rules.
- Phishing-to-execution incident: coordinated containment of a macro-based PowerShell/C2 compromise via EDR host isolation, blocked the sender domain and C2 IP, and proactively purged the same malicious attachment from 3 other mailboxes before it was opened — then directed a full reimage rather than partial cleanup.

IOC Monitoring & Threat Investigation — Indicator-to-Incident Handoff *[Threat Intel, SIEM/EDR Correlation]*

- Owned the handoff from threat intelligence to incident response: scored indicator confidence, correlated a malicious IP and a malware hash/C2 domain against SIEM and EDR data, and escalated a confirmed host compromise with full evidentiary handoff for containment.
- Connected findings across independent projects (the same brute-force IP flagged by both threat intel and SOC detection), demonstrating how correlated evidence strengthens incident confidence.

EDUCATION

[Degree] — ABV Govt Degree College, 2025
